

DIRECTORATE OF INTELLIGENCE 12 JULY 1983

Brazil: The Soybean Market

Brazil now ranks second to the United States in the

 internally, primarily as feedstock for the livestoc and poultry sectors. Another 2.5 million tons is processed into oil, about 60 percent for use by Brazilian low-income consumers. The remainder is exported, mainly to Mi Eastern markets. About 1.2 million tons of beans is consumed in Brazand about 1.0 million tons is exported worldwide. 	 About 10.3 million tons is processed into meal, 80 percent for export. The trade publication, 0il Worl indictes that Brazilian soymeal is mainly exported the EEC and Soviet Bloc countries.
60 percent for use by Brazilian low-income consumers. The remainder is exported, mainly to Mi Eastern markets. About 1.2 million tons of beans is consumed in Brazand about 1.0 million tons is exported worldwide. Unlike Washington, Brasilia intervenes heavily in the market. Prices are controlled, especially for soybean products, at the retail level. To assure an adequate domestic crop, however, farmers are treated to production incentives. The government guarantees producers a support price for soybeans. Farmers have the option of selling at market or to a Brazilian government agency. Soy producers are also treated to subsidized credit for production and marketing expenses.

25X1

25X1

Export marketing is also government controlled. Export taxes and quotas are used to assure adequate domestic soy supplies. Overseas marketing is handled by government and private firms. We believe Brazilian government trading companies are primarily responsible for handling sales to Soviet countries, especially those to the USSR guaranteed under long-term trading agreements. The private sector-Brazilian cooperatives and US multinational trading companies--apparently play the major role in shipping soy products to free-world destinations. These sales are negotiated annually on a contractual basis.

25X1

Brazilian soy exports are mainly shipped in the second half of the calendar year. The crop is planted in November and December, and the growing season lasts through March. Harvesting commences in April and is generally completed by the end of May. Export sales begin in June with the bulk sold in the September-November period.
